

Aurelia Executive Future Night 2026

2026-11-12 17:30 - 21:30 · Dress code: Business Elegant

Aurelia Executive Future Night 2026 is an exclusive, invitation-only business evening bringing together senior executives, innovation leaders and digital decision-makers for an inspiring evening in Budapest.

The event focuses on AI-powered business operations, the future of customer experience and next-generation digital services.

Following a series of short keynote sessions, guests are invited to enjoy informal networking, premium catering and an evening lounge programme at one of Budapest's most distinctive Danube-side venues.

Invites sent: 1
Checked-in guests: 0 / 16

Event capacity

1 Event credit(s) allocated

20 / 500 attendee slots used

0 free credit(s) available

Add 500 attendee slots for 1 credit

One Event credit covers up to 500 attendees. Multi-person invitations count by their full allowed attendance.

Import guest list

Upload Excel. Imported guests will be added to the event guest list.

If the imported Guest List exceeds the current capacity, the required free Event credits are allocated during import. If there are not enough credits, no Guest List changes are saved.

IMPORTANT: full synchronization from Excel

- Excel is the source.** Guests are identified by email (one email = one guest per event).
- New row in Excel** → a new guest is created. (Invites are sent later.)
- Existing row changed** → we update guest details (name, company, info, permissions).
- Row removed from Excel** → removed from the list (hard delete if not mailed yet, otherwise soft delete).

Sync uses the full Excel contents: anything not in the file is treated as removed.

Select file (XLS, XLSX)

Choose File No file chosen

Excel only: .xls or .xlsx

Columns in order: **Email**, **Name**, **Tickets** (number, default: 1) , **Info (e.g. company)**, **Extra items**, **Check-in staff** (yes/no), **Data reader** (yes/no).

Upload & import

Sample Excel template

Download the empty Excel template, fill it in, then import it back. This is the safest method because the template already contains all required columns.

- Email (required)
- Name (optional)
- Tickets (number, default: 1)
- Info (e.g. company) (optional)
- Extra items (optional)

Plain information and trackable items can both be added and separated with the | character.

Example: VIP|Main table|VIP Parking=0|Gift package=1

- Check-in staff (Yes / No)
- Data reader (Yes / No)

Items ending with =0 are available and can still be redeemed. Items ending with =1 have already been used or closed.

Download sample Excel

Export guest list

Download the current guest list as an Excel file. The export includes guest details, ticket quantities, additional information, roles and current statuses.

Download guest list

Manual editing

Edit guest details directly in the table, add new rows or paste multiple rows copied from Excel.

Quick editing from Excel: select the required rows in Excel, press Ctrl+C, click the first destination cell in the table and press Ctrl+V. The copied values will be distributed across the columns automatically. Click any column header to sort the table.

Additional information and custom items

Use the **Info** field to attach additional information or event-specific items to a guest. Separate multiple values with the | character.

A value without a status suffix is displayed as general guest information. For example: Vegetarian menu|VIP guest|Table 12.

Values ending in =0 or =1 are handled as custom items. Use =0 for an item that is still pending and =1 for an item that has already been completed or handed over. Custom-item statuses can be updated during the event by authorised **Entry staff** and **Data readers**. Data readers cannot check guests in.

Example: Welcome package=0|VIP parking=1|Vegetarian menu

The welcome package is still pending, VIP parking is already completed, and Vegetarian menu is shown as general information.

Permissions

Entry staff

Can start the check-in application, scan guest QR codes, search for guests manually, record admissions and update the status of custom items.

Data reader

Can scan QR codes, view the permitted guest details and custom items, and update custom-item statuses. Data readers cannot check guests in or change attendance.

Assign these permissions only to members of the event team. Their personal QR code or printed badge provides access to the corresponding check-in mode.

Print entry staff badges

Print badges for users with **entry staff permission** in advance and hand them to your check-in team. Each badge contains the QR code needed to start check-in.

Print entry staff badges
